

2 Matthew: MENTORSHIP

Slack from Matthew:

1. I have updated the pymentorship repo a bit: <https://github.ibm.com/Matthew-Mackenzie/pymentorship>
2. I created a tracker for us: <https://github.ibm.com/Matthew-Mackenzie/pymentorship/issues/1>
3. **Setting up environment**
 - python 3.11 - <https://www.python.org/downloads/>
 - VSCode: <https://code.visualstudio.com>
 - Install python extension
 - Create virtual environment: `python3.11 -m venv venv`
 - Activate virtual environment: `. venv/bin/activate`
 - Install jupyter tools: `pip install notebook ipykernel`
4. .

4: Location: HD/Applications/Python 3.11

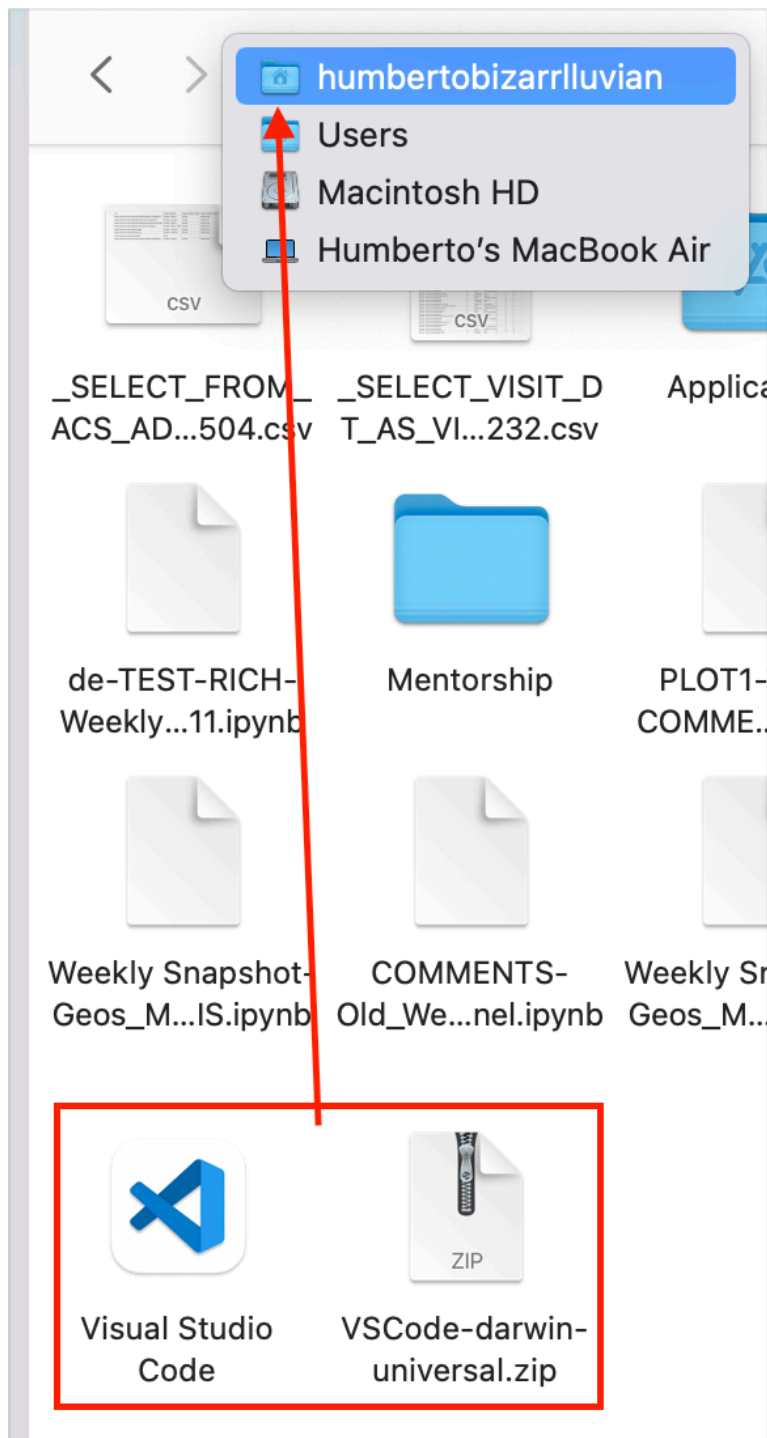

5: Location: /Users/humbertobizarro/lluvian

Starting with visual studio

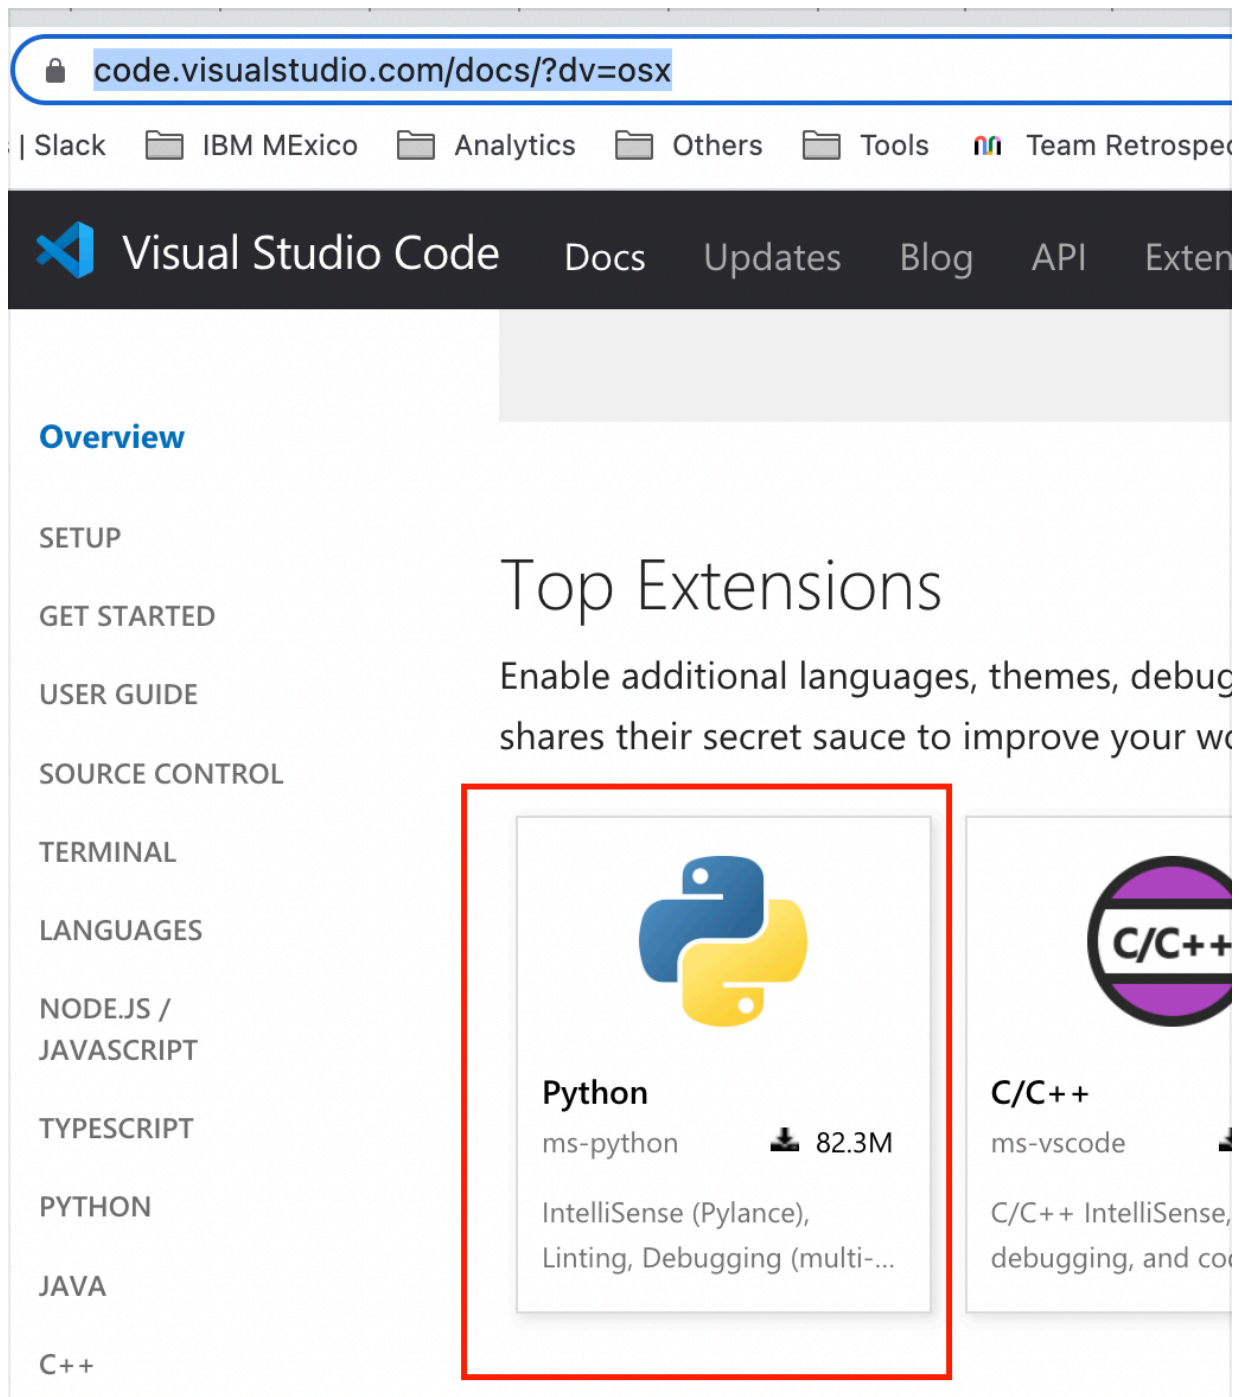

<https://code.visualstudio.com/docs/?dv=osx>

Moved these two from steps 5 to a new location (see screenshot below)

New location

step 6

7 Create virtual environment (**S7 is necessary just the first time, after that Visual studio opens automatically whne performing S9)**)

(**S10 does not need to be nessecary**)

S1 Open a new terminal (you need to open a new terminal per new project)

S2 Create a new project: Type mkdir "the new project name" :
mkdir python_projects

S3 Make sure you are working in the new project. Type cd name_of_project :
cd python_projects

S4 Create new environment. Type :

python3.11 -m venv venv

S5 **Activate the new environment.**

Type : . venv/bin/activate

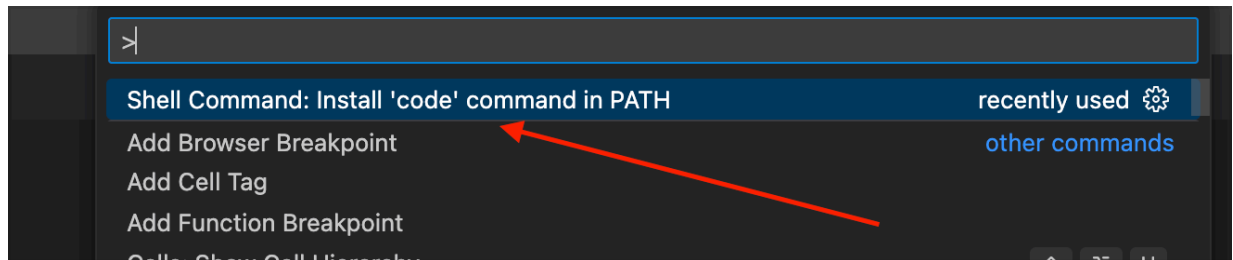

S6 **Install the notebook.**

Type :

pip install notebook ipykernel

S7 **Launch visual studio**

S8 **Install 'code'**. Press CMD + Shift + p .Select the next option "Shell command: Install 'code' command in PATH

S9 Back in the terminal

type : code .

This process will open another visual studio window so you can close the previous one

S10 THIS STEP DOES NOT SEEM TO BE NEEDED(CHECK WITH MATTHEW)

Type : zsh

S11 Back to visual studio. Top-Left, click in the new project you have (folder).

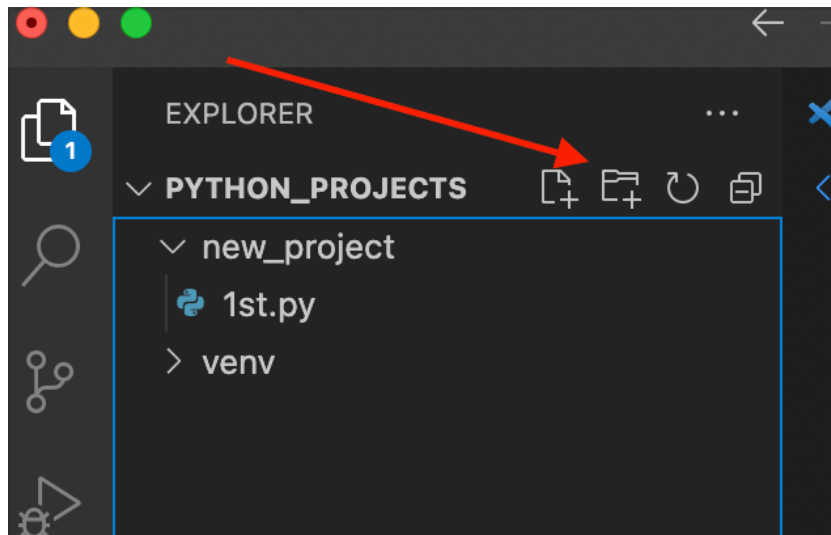

Then click in the + icon(folder) to create a new folder there:

S12 Name the new folder

S13 Click in that new folder

Click in the + icon (file). A new file is created

Right-click in the new file, add the extension .py so a python file is created

blockComment:

Windows: Shift + Alt + A.

Mac: **Shift + Option + A.**
